

AWS Best Practices

Security

- Follow the principle of least privilege using IAM.
- Enable Multi-Factor Authentication (MFA) for privileged users.
- Rotate access keys regularly.

Storage

- Store application documents in Amazon S3.
- Enable versioning for important buckets.
- Encrypt data using AWS-managed or customer-managed KMS keys.

Compute

- Use AWS Lambda for serverless workloads.
- Monitor applications using Amazon CloudWatch.

Networking

- Place resources inside a Virtual Private Cloud (VPC) when required.
- Restrict inbound traffic using Security Groups.

Cost Optimization

- Delete unused resources.
- Monitor costs using AWS Cost Explorer.
- Use Auto Scaling where applicable.
